Gentoo KDE: stable, fresh, and bleeding edge!

Introduction ●	What is KDE 00000 000	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Tomáš				
			(

Who the hell is Tomáš Chvátal

- Council member (currently second term)
- KDE team member (former lead)
- Libreoffice maintainer
- Formely also working on X11, Overlays, Clustering, QA, ...

	What is KDE ●0000 000	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Overview				
What is I	KDE			

Fancy Qt based desktop environment with many features.
Visually appealing and configurable.
Bloated thing wrt database usage.

	What is KDE 0●000 000	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Overview				
How to m	ake not pair	and really usable		

- Make the nepomuk (aka semantic-desktop) optional for those who prefer to use their system rather than index its content all the time.
- Make akonadi also optional and allow installation of pre-akonadi versions to have something really usable :-)
- Make all this fun run on hardened and so make it bit safer.

Gentoo KDE: stable, fresh, and bleeding edge!

	What is KDE 00●00 000	What can I do for KDE in Gentoo oo	KDE SC 5	Wrap-up 000
Overview				

Running KDE on gentoo

- Use desktop or desktop/kde profile
- Enable devicekit and consolekit useflag
- Select the packages that are actually needed

	What is KDE 000●0 000	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Overview				
What pa	ckages would	llneed		

- kde-base/kde-meta: Not really, this is metapackage that includes EVERYTHING.
- kde-base/kdebase-meta and kde-base/kdebase-runtime-meta:
 Basic subset on which one can install additional packages.
- kde-base/*-meta: These are joint packages per various category.

	What is KDE 0000● 000	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Overview				
Interesting	useflags			

- semantic-desktop: useflag controlling all akonadi, virtuoso and nepomuk dependencies.
- udisks/upower: enable or disable dependency over these tools, it is runtime detected tho.

	What is KDE ○○○○○ ●○○	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Bleedingness				
Stable				

- Bit older than latest released stable version from upstream, but tested a lot to ensure its stability.
- Usually new stable version is done every other month.

	What is KDE ○○○○○ ○●○	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Bleedingness				
Testing				

- Always 0 day version bump with latest upstream released stuff.
- Usually contains a lots of issues that upstream didn't care enough to fix.
- This stuff is taken from overlay by fancy update script in bash I wrote 4 years ago.

	What is KDE ○○○○○ ○○●	What can I do for KDE in Gentoo 00	KDE SC 5	Wrap-up 000
Bleedingness				
Overlay - boxen	- aka snapsh	ots / live stuff; let m	e break you	

- Usually live versions of master branch and currently produced branch (ie. 4.8 when 4.9 is in development).
- The overlay is the place where all the development is done.
- The branch ebuilds are usually just the bug fixes to next release.
- Live ebuilds is where magic happens, and you will usually cry for help when stuff breaks.

- Join #gentoo-kde on freenode.net and chat with us about your secret plans.
- Clone up the git repository and help others by using live ebuilds and fix the issues.
- Fire up bugzilla and help us closing issues (we like to have just few bugs, something around 100 is perfect).

- New KDE subproject with focus on stable users.
- Team simply works on testing various packages from the testing tree and moves them for stabilisation if they meet the requirements.
- Actually anyone who is using stable system (nothing much keyworded) can join this team and help up.
- Planned results for this team are to provide even more polished KDE experience on stable systems.
